Product Description

SS201 Stainless Steel Plate Cold-Rolled ASME 0.8mm Thickness 2B Finish Container Use 1000 * 2000mm Size

Product Description

201 stainless steel sheet is a low-nickel stainless steel sheet. Moreover, it is a high-strength hardened austenitic stainless steel. Meanwhile, its chromium content is 16%-18%, and its nickel content is 3.5%-5.5%. Because the price of nickel is relatively high, to save a nickel, people made 201 stainless steel sheets. Therefore, it is characterized by low nickel content. Moreover, one cannot harden it by heat treatment. However, people can cold work it into a sheet with high tensile strength. Moreover, in some cases, it can replace other alloys with higher nickel content.
