Product Description

Carbon steels are alloys of iron and carbon-containing between 0.1% and 1.5% of carbon. In addition to carbon, it also contains the following materials either as residual elements from the process or by design. Carbon steel plates are made from an alloy comprised of iron and carbon.

Carbon Steel Plate is one of the most commonly used steels in the United States. Alloy steels can contain a variety of elements including chromium, nickel, and vanadium. According to The American Iron and Steel Institute, Steel can be defined as a carbon steel when no minimum content is specified or required for chromium, cobalt, columbium, molybdenum, nickel, titanium, tungsten, vanadium, zirconium, or any other element that would be used to achieve an alloying effect. We are experts at supplying carbon steel plate and are a leading carbon steel plate vendor, as well as leading suppliers of carbon steel sheet. Carbon plate is available in "as rolled" or heat treated condition, in master dimensions or cut to size for desired part profile. A wide range of carbon plate to certifications or specifications – such as ASTM, ASME, API, CSA, AISI, ABS, Lloyds and DNV – is also available, as are a comprehensive range of processing services for carbon plate products including: Plasma & oxy-fuel cut parts & profiles (hi definition & conventional)
