Product Description

Q195 AISI Carbon Steel Plate 20mm Thickness 1000 * 2000 mm Size Black Color Construction Use Hot - Rolled

Product Description

Mainly refers to steel with a mass fraction of carbon less than 2, 11 percent and not containing deliberately added alloying elements. Sometimes also called plain carbon steel or carbon steel.

Carbon steel is also called carbon steel, refers to the carbon content of less than 2 percent, 11 percent iron carbon alloy.

Carbon steel generally contains a small amount of silicon, manganese, sulfur and phosphorus in addition to carbon.

Carbon steel is mainly classified by name: pig iron, carbon structural steel, high quality carbon structural steel, low alloy structural steel, alloy structural steel, spring steel and bearing steel, tool steel, stainless steel and heat resistant steel and so on.

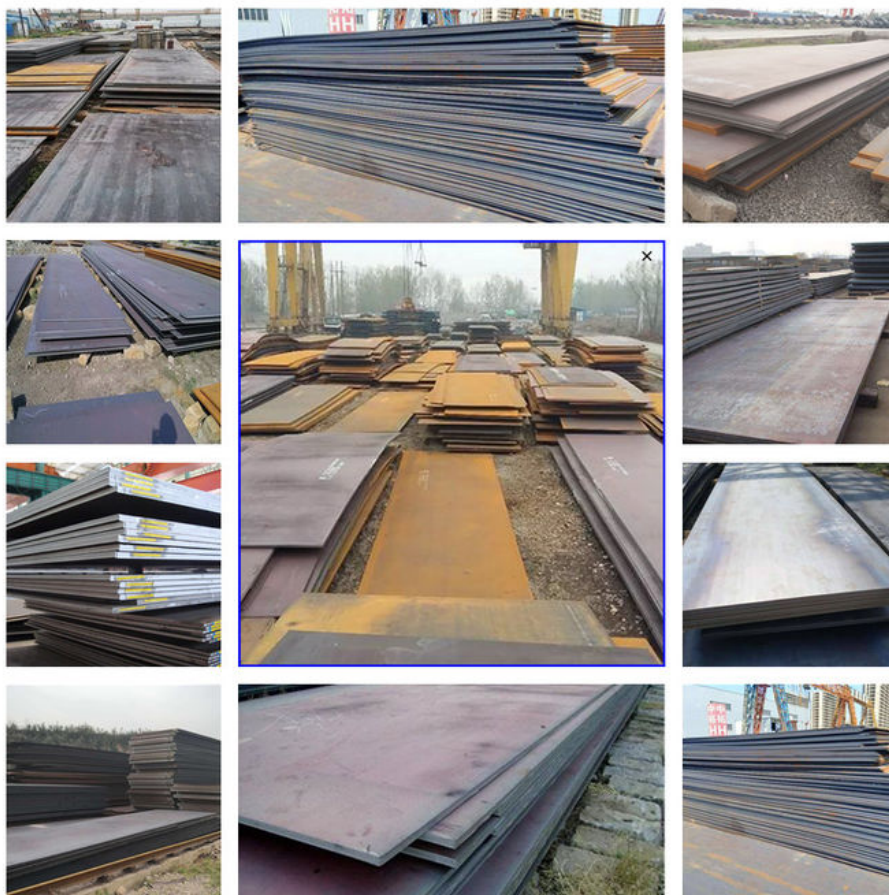

(1) Carbon steel can be divided into carbon structural steel, carbon tool steel and free cutting structural steel, carbon structural steel is divided into engineering construction steel and machine manufacturing structural steel two kinds;

(2) according to the smelting method can be divided into open hearth steel, converter steel;

(3) According to deoxygenation method can be divided into boiling steel (F), sedation steel (Z), semi-sedation steel (b) and special sedation steel (TZ);

(4) according to the carbon content can be divided into low carbon steel ($WC \leq 0.25\%$), medium carbon steel ($WC 0.25\%-0.6\%$) and high carbon steel ($WC > 0.6\%$);

(5) According to the quality of steel, carbon steel can be divided into ordinary carbon steel (higher phosphorus and sulfur), high quality carbon steel (lower phosphorus and sulfur) and high quality steel (lower phosphorus and sulfur) and super high quality steel.
