## Product Description

Galvanized Steel Pipe DC53D 90mm OD 8mm Thickness Hot-Dipped Silver White Heating Facilities Use SUS Standard

### Product Description

Galvanized steel pipes are made of steel that has been covered with a layer of zinc metal. During the galvanizing process, we immerse the steel in a molten zinc bath ensuring a tough uniform barrier coating.

It is widely used in the construction industry, but can also be found in a variety of manufacturing and industrial applications. In plumbing systems, steel pipe can be used to transport liquids and gases for commercial and residential buildings, as well as in municipal water supplies. This material also acts as a structural component for scaffolding and framing systems.
