Product Description

16Mn Mild Steel Sheet Hot Rolled 50mm Thickness GB 1500*6000mm For Building

Product Description

Steel with a mass fraction of carbon less than 2.11% and without specially added alloying elements. Sometimes called plain carbon steel or carbon steel. In addition to carbon steel generally contains a small amount of silicon, manganese, sulfur, phosphorus. According to the use of carbon steel can be divided into carbon structural steel, carbon tool steel and easy cutting structural steel three types, carbon structural steel is divided into engineering construction steel and machine manufacturing structural steel two kinds. According to the quality of steel, carbon steel can be divided into ordinary carbon steel (higher phosphorus and sulfur content), high quality carbon steel (lower phosphorus and sulfur content) and high quality steel (lower phosphorus and sulfur content) and extra high quality steel. Generally, the higher the carbon content of carbon steel, the greater the hardness, the higher the strength, but the lower the plasticity. Such as Q235 can make bolts, nuts, dowel, hook and less important mechanical parts and building structure in the bar steel, steel, steel, etc
