Product Description

EN 304 Stainless Steel Channel Beam 6.5mm Hot rolled Thickness Building Use Sliver Color

Product Description

The channel beam or C-beam is a type of structural steel used in the construction of buildings and civil engineering. When you look at the channel beam it looks like the letter C. A tapered channel's ends narrow whereas the non-tapered channel's ends are the size of the steel it is formed from, having squared off edges. The C-beam or channel beam is known to be welded back to back to create I-Beams.
