Product Description

Stainless Steel 304 Color Sheets SS Plates ASME Customized Color 1219*2438mm Size 0.9mm Thickness

Product Description

The reason why SS 304 material does not rust is because the Cr and Fe in it are oxidized to form a dense passive film to prevent further corrosion.

AISI 304 stainless steel has excellent corrosion resistance in mild atmosphere and fresh water, and even the surface will not rust. But it's not resistant to halide (such as chloride, fluoride, etc.) corrosion, because the halide can easily penetrate the passive film and make stainless steel lose the resistance.
