Product Description

Spiral Steel Pipes And Tubing API 5L Oil Pipes 220mm OD 8mm Thickness 12 Meters Length Q235B

Product Description

Spiral steel pipe or spiral welded pipe are other terms for spiral pipe. Steel strip coil is used as the raw material, then extruded at room temperature and welded using an automatic double wire double-sided submerged arc welding technique—the outer diameter. The wall thickness formula defines the requirements of spiral welded pipe, which is utilized for oil and natural gas pipelines. The weld joint's hydrostatic test, tensile strength, and cold bending performance must all be in line with the regulations for the spiral welded pipe. Spiral welded pipes are available in various sizes. However, they are mostly used for sizes in excess of 20 inches NPS.
