Product Description

Stainless Steel Coil 400 Series Grade 410 420 430 ASTM SUS JIS Standard 0.1-14mm Thickness Customized Size

Product Description

AISI 410 stainless steel is one of the most commonly used martensitic stainless steels. It contains about 12% Cr and therefore provides moderate corrosion resistance. Unlike austenite such as AISI 304 and AISI 316, martensite such as grade 410 is magnetic and can be hardened by heat treatment like carbon steel and low alloy steel. SS410 has good tensile strength, creep and fatigue strength and other mechanical properties, mainly used in steam turbines, jet engines and gas turbines.

Product Properties
