## Product Description

201 Stainless Steel Coil Grade J1 J2 J3 7mm 8mm Thickness Customized Width SUS JIS ASTM 201 SS Coils

### Product Description

Annealed SS 201 is composed primarily of iron with between 16 and 18% chromium and up to 0.15% carbon. It also contains trace amounts of manganese, nickel, silicon, nitrogen, and copper. Due to UNS S20100's low carbon content and lower levels of other metals than other types of stainless steel, it has higher formability than the 300 series grades. In addition, it can be hardened by cold working processes but not heat-treated like 304 or 316 grades.
