Product Description

SS304 Pipes Tubes Stainless Steel Pipes 10mm OD 1mm Thickness Seamless Pipes ASTM AISI

Product Description

Stainless steel is a flexible material that is widely employed in all potential applications. Austenitic chromium alloy, or stainless-steel grade 304, is a type of stainless steel that incorporates 18% chromium and 8% nickel. Alternatives to chloride, however, can deteriorate 304 stainless steel. In corrosion zones only, chloride ions can cause pitting or cracking. When chromium oxide barriers exist, these compromised sections can spread to impair internal components.
