ASME Standard Stainless Steel Sheets**

## Product Description

Stainless Steel Sheets/Plates 304 Inox 1mm Thickness ASME Standard 1219\*2438mm Size Cold-Rolled SS Sheets

### Product Description

Stainless steels get their names from the American Iron & Steel Institute (AISI) and the Society of Automotive Engineers (SAE), who have separately created their own naming systems for steel alloys based on alloying elements, uses, and other factors. Steel names can get confusing, as the same alloy can have different identifiers depending on which system is used; however, understand that the chemical composition of most alloy blends remains the same across classification systems. In the case of stainless steels, they are often composed of 10 to 30% chromium and are made to withstand varying degrees of corrosion exposure.
