Product Description

430 Stainless Steel Sheets Plates Chinese SS Plates 0.8mm 1mm Thickness AISI GB Standard Cold-Rolled 4*8 SS Plates

Product Description

430 stainless steels are a commercially important class of materials, as they deliver much of the material-property range of similar, higher-cost materials. This is a result of careful tuning of the alloy to provide many of the beneficial properties of the broader class, with minimal use of the highest-cost alloying components such as nickel (at most, variants contain 0–0.75%). It derives many of its beneficial properties from the 16–18% chromium content. It is generally manufactured using a carbon arc furnace or inductive furnace.
