Product Description

400 Series Stainless Steel Sheets Plates Chinese 430 420 SS Sheets 0.6mm 0.8mm Thickness 4*8 Size ASTM Standard

Product Description

430 stainless steel is a ferritic stainless steel alloy, from the 400 series of stainless steels. This material is valued for its corrosion resistance, moderate strength, and affordability compared to other stainless steel grades. It contains approximately 17% chromium, which provides its corrosion resistance. However, it has a low nickel content, around 0.75% (maximum), which makes it less expensive than austenitic stainless steel.
