## Product Description

Q235 Hot-rolled Carbon Steel Coil 5mm OD 1200mm Width GB Mild Steel Coil For Tunnel construction

### Product Description

Carbon steel coil is a type of coil made of carbon steel, which has high strength, high hardness, good wear resistance and hardenability. It is widely used in various fields such as mechanical manufacturing, automobile manufacturing, construction, bridges, container manufacturing, etc.

### Ingredients and manufacturing process

The main components of carbon steel coils are iron and carbon, and may also contain small amounts of elements such as silicon, manganese, phosphorus, sulfur, etc. Carbon steel is usually processed into coil form through hot rolling or cold rolling processes.

### application area

Carbon steel coils are widely used in various industries such as construction, manufacturing, shipbuilding, and automobiles. Its quality and performance are directly related to the safety and service life of the product, so strict testing is crucial.

### Testing items and standards

The testing items for carbon steel coils include quality inspection, composition testing, non-destructive testing, impact strength, metallographic structure, ROHS testing, etc. The testing process is completed by specialized testing technicians, using advanced equipment such as atomic absorption spectroscopy, spark direct reading spectrometer, etc. to ensure the scientific and reliable nature of the data. Normally, a nationally recognized testing report can be issued within 5-10 working days.
